## C-DIAS Multi I/O Module

## $8 \times$ digital inputs (+24V, $5 \mathrm{~mA}, 5 \mathrm{~ms}$ )

Inputs 1 - 2 useable as counter ( $+24 \mathrm{~V}, 5 \mathrm{~mA}, 1 \mu \mathrm{~s}$ )
Input 3 useable as interrupt ( $(+24 \mathrm{~V}, 5 \mathrm{~mA}, 10 \mu \mathrm{~s}$ )
8 x digital outputs (+24V, 2A, short-circuit protected, $400 \mu \mathrm{~s}$ )
2 analogue inputs $0-10 \mathrm{~V} / 12$ bit / 100ms (up to version 3.1)
2 analogue inputs $0-10 \mathrm{~V} / 12$ bit / 10ms (from version 3.1)
1 analogue output $\pm 10 \mathrm{~V} / 12$ bit / $50 \mu \mathrm{~s}$
The CIO 011 module has 8 digital short-circuit proof outputs $+24 \mathrm{~V} / 2 \mathrm{~A}$ (positive switching) as well as 8 digital inputs +24 V / $5 \mathrm{~mA} / 5 \mathrm{~ms}$ for the reading-in of the signal status " 0 " and "1".

Two inputs can be used as counter and one input is interruptcapable. Beside two analogue inputs ( $0-10 \mathrm{~V}$ ) an analogue output is available for voltage output $( \pm 10 \mathrm{~V})$. The supply voltage of each channel group is checked on low voltage.

## Technical data

## Digital input specifications

| Number | 8 |  |
| :--- | :---: | :---: |
| Input voltage | Typical +24V | Maximal +30 V |
| Signal level | Low: <+8V | High: >+14V |
| Switching threshold | Typical +11V |  |
| Input delay | Typical 5ms |  |
| Input current | Typical 5mA at +24V |  |
| Status display | Optional (green LEDs) |  |
|  |  |  |

| Input 1 -2 | Used as a counter |  |
| :--- | :---: | :---: |
| Counter function | Maximum Input frequency 25 kHz |  |
| Signal level | Low: $<+4 \mathrm{~V}$ | High: >+8V |
| Threshold | Typically 6 V |  |
| Input delay | $1 \mu \mathrm{~s}$ |  |

| Input 3 | Used as interrupt (Interrupt only functions on the local C-DIAS bus) |  |
| :--- | :---: | :---: |
| Signal level | Low: $<+4 \mathrm{~V}$ | High: $>+8 \mathrm{~V}$ |
| Threshold | Typically $+6 \mathrm{~V}$ |  |
| Input delay | $10 \mu \mathrm{~s}$ |  |

## Digital output channel specifications

| Number | 8 |
| :--- | :---: |
| Protection against short circuiting | Yes |
| Maximum permissible constant <br> current / channel | 2 A |
| Maximum total current <br> (per 4 channels) | $6 \mathrm{~A}(100 \%$ switch-on time) |
| Maximum total current <br> (whole module) | $12 \mathrm{~A}(100 \%$ switch-on time) |
| Maximum switch-off energy of the <br> outputs (inductive load) | Maximum 0.25 Joule/channel |
| Voltage drop across the supply <br> (output switched on) | $\leq 1 \mathrm{~V}$ |
| Residual current output <br> (switched off) | $\leq 12 \mu \mathrm{~A}$ |
| Switch-on delay | $<400 \mu \mathrm{~s}$ |
| Switch-off delay | $<400 \mu \mathrm{~s}$ |
| Status display | Optional (yellow LEDs) |

SIGMATEK

## Analogue input channel specifications

| Number of channels | 2 (4-wire connection) |  |
| :---: | :---: | :---: |
| Measuring range | $0-10 \mathrm{~V}$ |  |
| Measuring value | 0-4000 |  |
| Resolution | 12 bit |  |
| Conversion time per channel | $\leq 15 \mu \mathrm{~s}$ |  |
| Input resistor | >200k $\Omega$ |  |
| Input filter (up to / including version 3.0) | Cut-off frequency 10 Hz (100ms) | Low pass class 3 |
| Input filter (from / including version 3.1) | Cut-off frequency 100 Hz (10ms) | Low pass class 3 |
| Reference output | +10V / $\pm 5 \%$ |  |
| Capacity of the reference voltage per channel | 2.5 mA |  |
| Analogue channel measurement precision | $\pm 0.5 \%$ of the maximum measured value |  |

Diagrams valid up to HW version 3.0

## Analogue output channel specifications

| Number of channels | 1 |
| :--- | :---: |
| Output voltage | -10 to +10 V DC |
| Output value | -2000 to +2000 |
| Resolution | 12 bit (5mV / bit) |
| Capacity of the output voltage | $>10 \mathrm{~K} \Omega$ |
| Protection against short-circuiting | Yes |
| Transient time | $<50 \mu \mathrm{~s}$ |
| Refresh time of all channels | $<1 \mathrm{~ms}$ |
| Precision of the analogue channel | $\pm 0.5 \%$ of the output size |

## Electrical requirements

| Supply voltage $+24 \mathrm{~V} / 1-2$ | $18-30 \mathrm{~V}$ DC |  |
| :--- | :---: | :---: |
| Current consumption supply <br> voltage $+24 \mathrm{~V} / 1-2$ | Corresponds to the load on the digital outputs (max. 6A / group of 4) |  |
| Supply of the C-Dias bus | Typical 5mA |  |
| Current consumption on the <br> C-Dias bus (+5V supply) | Typical 50mA | Maximum 20mA |
| Current consumption on the <br> C-Dias bus (+24V supply) | Maximum 70mA |  |

## Voltage surveillance

| Supply voltage $+24 \mathrm{~V} / 1-2$ | Supply voltage $<18 \mathrm{~V}$ (Error LED lights red) |
| :--- | :--- |

## Miscellaneous

| Article number | $12-013-011$ | With status display (green, yellow and red LEDs) |
| :--- | :---: | :---: |
| Hardware version | $1 . x-4 . x$ |  |
| Standard | UL (E247993) |  |

## Environmental conditions

| Storage temperature | $-20-+85^{\circ} \mathrm{C}$ |  |
| :--- | :---: | :---: |
| Environmental temperature | $0-+60^{\circ} \mathrm{C}$ |  |
| Humidity | $0-95 \%$, without condensation |  |
| EMV stability | In accordance with EN $61000-6-2: 2001$ (industrial) |  |
| Resistance to shocks | EN $60068-2-27$ |  |
| Protective system | EN 60529 |  |

## Mechanical dimensions

## Connections

## X1: Plug analogue inputs + analogue output

| Pin | Function |
| :---: | :---: |
| 1 | Al1- |
| 2 | Al1+ |
| 3 | AGND |
| 4 | +10 V |
| 5 | Al2- |
| 6 | Al2+ |
| 7 | AGND |
| 8 | +10 V |
| 9 | AGND |
| 10 | AOUT |

## X2: Plug input 1 - 4

| Pin | Function |
| :---: | :---: |
| 1 | Input 1 |
| 2 | Input 2 |
| 3 | Input 3 |
| 4 | Input 4 |

X3: Plug input 5-8

| Pin | Function |
| :---: | :---: |
| 1 | Input 5 |

| 3 | Input 7 |
| 4 | Input 8 |

X4: Plug output 1 - 4 (+24V1/G3)

| Pin | Function |
| :---: | :---: |
| 1 | Output 1 |
| 2 | Output 2 |
| 3 | Output 3 |
| 4 | Output 4 |

X5: Plug output $5-8$ (+24V2/G4)

| Pin | Function |
| :---: | :---: |
| 1 | Output 5 |
| 2 | Output 6 |
| 3 | Output 7 |
| 4 | Output 8 |

## X6: Plug supply

| Pin | Function |
| :---: | :---: |
| 1 | +24 V 1 (for output 1-4) |
| 2 | +24 V 2 (for output 5-8) |
| 3 | EXGND |
| 4 | EXGND |

## Usable connectors

## Connector with spring clamp:

Phoenix Contact: FK-MCP 1.5/ 4-ST-3.5
Weidmüller: 10-pol. bus socket B2L/B2CF 3,5/10

## Connector with screw clamp technique:

Phoenix Contact: MC 1.5/4-ST-3.5

The complete C-DIAS plug set CKL 035 with spring clamp is available from Sigmatek with the article number 12-600-035.

## Status displays

| LED no. | LED color | Meaning |
| :---: | :---: | :--- |
| $1-8$ | green | Inputs $1-8$ |
| $9-16$ | yellow | Outputs $1-8$ |
| G1 - G2 | --- | not used |
| G3 - G4 | red | Error LED - missing voltage <br> supply +24V1 (G3 for outputs <br> $1-4) ~ o r ~+24 V 2 ~(G 4 ~ f o r ~ o u t p u t s ~$ <br> $5-8) ~$ |

## Wiring instructions

The signals detected from the analogue module are very small in comparison with the digital signals. In order to guarantee trouble free functioning it is essential to stick to a meticulous wiring arrangement:

- The OV supply voltage connection must follow the shortest path the common OV terminal.
- The top-hat rail must be properly connected to earth.
- The connecting wires to the sources of the analogue signals must be as short as possible and avoid lying in parallel to wires carrying digital signals.
- The signal carrying wires should be screened.
- The screening must be connected to a common screening rail.

## Voltage measurement with potentiometer (odometry)

If the voltage at the analog inputs should be measured with a Potentiometer, the client "„Al1_TypeOfChannel / Al2_TypeOfChannel" must be initialized with 0. The K- input must be connected to the analogue GND connection.

Connection pattern 1

## Active voltage source

If a measurement should be taken at the analog inputs with an active voltage source, the client "„Al1_TypeOfChannel / Al2_TypeOfChannel" must be initialized with 1. With voltage sources, which are not potential free, no connection must be made between input and GND or analogue GND.

Connection pattern 2

Example of application: axis control for direct current servos, frequency converter

Connection pattern 3

## Addressing

| Address | Access | Function |
| :---: | :---: | :---: |
| 00h | WR8 | Digital outputs 1-8 |

## Counter function

The module offers the possibility of a counter function. The inputs $1-2$ are each assigned a counter. The maximum input frequency is 25 kHz .

There are 3 configurable modes: Counter counts with positive flank
1-x evaluation
4-x evaluation
Assignment of the inputs to the counters:

| Input | Counter |
| :---: | :---: |
| 1 | Counter 1 |
| 2 | Counter 2 |

Counter mode register: With help from this register, it is possible to define the mode of each input (counter).

The following modes are available:
00: Counter 1 counts with positive input 1
Counter 2 counts with positive input 2
01: Reserved
02: NC 1-x input $1=A$, input $2=B$ (dir)
Counter 1 counts, Counter 2 no function
03: NC 4-x input $1=A$, input $2=B$
Counter 1 counts, Counter 2 no function

## Interrupt function

The module offers the possibility to change the condition of input 3 through hardware interrupts. Using interrupts the module can be configured through the software.

The following register is available for the configuration of the input interrupt:
Interrupt status register: With the READ access the interrupt is acknowledged and the register is cleared.

For technical reasons, the interrupt function can only be used on the local C-DIAS bus!
Pour des raisons techniques, la fonction d'interruption ne peut être utilisée que sur le bus C-DIAS local!
