

LVD Recipe

The LVD Recipe components allow the user to create new recipes and load existing recipes onto a machine. It is also possible to adjust individual parameters of a recipe before it is transferred to the machine.

With the help of recipes, it is possible to map configurations for different products or processes. The LVD components required for recipe management are included.

FEATURES

- Management of machine recipes on the terminal
- Native integration in LASAL VISUDesigner for the acquisition of data points
- Display recipe values before loading
- Display of details of the loading or storage process (limit violations etc.)
