LSE RecipeHandling

The RecipeHandling Add-On enables the display and file handling in the recipe management section, similar to the file explorer with additional data set functions.
Via the file explorer, data sets can be generated, loaded, deleted, renamed, etc.
Data sets can also be grouped, whereby one or more group can be saved or loaded. For example, values from different system sections can be managed as separate recipes.
This Add-On contains the program elements for the LASAL CLASS project, as well as the LASAL SCREEN projects for multiple resolutions.

FEATURES

- Browser limited to the recipe management section (Tool catalog)
- Create, rename, copy and delete folders
- Rename, copy and delete files
- Load or save data sets
- Preview for saved recipes
- Integration with SIGMATEK EventJournal prepared
